Subject:	PMP Technical Support - Evaluation Customer

Hi All

Thanks a lot for your support. Specifying the installation property file (-f primary.txt) did the trick.
Now I'm facing another issue with the installation. But since this is a different one, maybe a new ticket is needed …

The main reason for running the installer in silent mode is to build a docker container with the PMP inside.
So I choose the latest Ubuntu Image and run the installer with: `./ManageEngine_PMP_64bit.bin -i silent -f secondary.txt`
The installation works without any issues, but then I tried to: `cd /opt/PMP/bin/; /bin/bash ./pmp.sh install`

While this line works perfectly in an active bash shell, it fails while building the container with:
`The command '/bin/sh -c cd /opt/PMP/bin; /bin/bash ./pmp.sh install' returned a non-zero code: 1`

Unfortunately that's it … no further information on what went wrong. Afterwards there are no additional files in /etc/init.d so I'd conclude the install failed …

Can you help me out on this one ?

This is the Dockerfile:

```
FROM ubuntu:latest

RUN        apt-get update
RUN        apt-get install -y unzip
COPY       ManageEngine_PMP_64bit.bin .
COPY       inst.txt .
RUN        ./ManageEngine_PMP_64bit.bin -i silent -f inst.txt

RUN        cd /opt/PMP/bin; /bin/bash ./pmp.sh install
ENTRYPOINT ["/etc/init.d/pmp-service", "console"]
```

EXPOSE 72

Regards

Martin

Hi Martin,

Thanks for the email.

This argument "-fileOverwrite_/<install_location>/_ManageEngine Password Manager Pro_installation/Change ManageEngine Password Manager Pro Installation.lax=Yes" will automatically accept the licensing terms and agreements and proceed further.

"I replaced the "/<install_location>/" part with "/opt" … but what about the rest? Is there more that could/need to be altered ?" - Could you please elaborate more on this question to assist you better?

Look forward to hearing from you.

Thanks & Regards,

Feroz
